**Quentin Blake**

4. Tattie Bogle, Hodmedod and Murmet are all types of what?

**Scarecrow**

5. In ITV's series *Downton Abbey* who plays Lady Mary Crawley?

**Michelle Dockery**

## Notes and corrections

1. The correct name of the character is Emile de Becque, not Anton LeBeque.
2. Colónes is the plural of the more commonly-used singular form, colón.
3. 'Pomelo' is an equally acceptable answer.
4. Ben Macdhui is not the second-highest mountain in South Africa.
5. Equally acceptable answers are: 'citric acid cycle' or 'tricarboxylic acid cycle' or 'TCA cycle'.

When compared to all other Krebs-related mnemonics, this one appears to have a superfluous letter 'o' and a missing second letter 's'.

6. According to the overwhelming majority of sources incunabula were printed before 1501.
7. Many sources give the answer as 74 mph.
8. This is one of only one of [a number of possible etymologies](#) for antimony.
9. 'William III' is an alternative acceptable answer. He reigned jointly with Mary from 1689-94 and for a further eight years after her death.
10. Many sources give alternative answers to this question, particularly the opossum and the Eastern quoll (Australian eastern native cat).
11. 'Rugby Sevens' is an equally acceptable answer.
12. 470 mL is the standard size of donation for whole blood in the UK. Most other countries have their own preferred size of donation, usually from 200 to 500 mL.
13. The fact that only one A Division team scored over 50 suggests the questions were a bit on the hard side and this is supported by feedback received. That said, with one (possibly two) exception(s), the questions complied with the guideline that aggregate scores should be at least 80.
