***The Norman Conquests*** (by Alan Ayckbourn)

## Notes

1. An average score of 42.0 and five out of twelve scores below 40 suggest that the questions may have been a bit too tough. **All** question setters are reminded of our guidelines: *Don't make the questions too hard. This is the Stockport Quiz League, not University Challenge, and is meant to be a fun night out! As a general rule-of-thumb all teams should be able to answer at least half the questions correctly, so aggregate scores should not be lower than 80.*
2. Whilst the given answer is correct, the geniohyoid muscle's **principal** function is to move the hyoid bone during breathing and chewing/swallowing, so 'hyoid bone' is an equally (and probably more) correct answer.
